

# FikaSync: Autonomous Swedish Fika Compliance Agent

*Startup Pitch Submission - FikaSync Technologies AB*

## EXECUTIVE SUMMARY & PROBLEM STATEMENT:

- Problem: Software engineers in Stockholm are pushing git commits during statutory 10:00 and 15:00 fika hours, violating Swedish collective bargaining agreements.
- Solution: Autonomous agent intercepts GitHub webhooks and Slack events; revokes AWS IAM credentials and locks VS Code if a developer codes without a certified kanelbulle.
- Market Size: 45,000 Nordic tech companies bound by Union collective agreements.
- Business Model: Enterprise SaaS at 89 SEK per engineer/month. Seamless integration with Swedish Work Environment Authority (Arbetsmiljöverket).
- Defensibility: Proprietary Kanelbulle-Vision neural network running on edge espresso machines.
